

JSRO

Robotics • AI • Innovation • Education

WHAT WE DO

JSRO builds practical robotics and AI experiences for students, schools, educators, and innovation-focused organizations. We combine hands-on learning, competitions, workshops, bootcamps, product development, and R&D.;

01 School Programs	02 Workshops	03 Competitions	04 Bootcamps
------------------------------	------------------------	---------------------------	------------------------

Making technology understandable, buildable and exciting.

Our Core Programs

SCHOOL SUBSCRIPTION / SCHOOL PROGRAM

A structured long-term robotics and AI program for schools. JSRO can provide curriculum support, practical sessions, project-based learning, teacher support, and recurring innovation activities.

Best for: Schools looking for an ongoing STEM / robotics program.

WORKSHOPS

Short, practical sessions focused on a specific technology or project. Topics can include Arduino, ESP32, sensors, IoT, robotics, AI, automation, smart systems and beginner engineering.

Format: 1–3 hour sessions, half-day or full-day programs.

BOOTCAMPS

Intensive learning programs where participants move from concepts to a working prototype. Bootcamps can be conducted online or offline and can use simulation platforms such as Tinkercad when hardware is not available.

Format: Weekend, multi-day or custom-duration programs.

COMPETITIONS

Robotics and innovation competitions designed around real engineering challenges. Participants build, test, present and improve their solutions while developing teamwork and problem-solving skills.

Examples: Line follower, obstacle avoidance, smart-city challenges, IoT challenges and open innovation.

EVENTS & INNOVATION DAYS

Technology events for schools, colleges, communities and organizations. JSRO can combine demonstrations, mini challenges, project showcases, talks and hands-on activities into one experience.

Format: Innovation Day, Tech Fest, STEM Day, Demo Day or custom event.

R&D; & PROJECT DEVELOPMENT

JSRO develops prototypes and educational technology concepts involving robotics, AI, IoT, embedded systems and automation. We can also support organizations with project prototyping and technical development.

Focus: Practical prototypes, product concepts and experimental systems.

JSRO for Schools

JSRO can work with schools as a technology education partner rather than as a one-time activity provider. Programs can be customized around the school's age group, timetable, infrastructure and learning goals.

Program	What Students Experience	Typical Outcome
Robotics Foundation	Electronics, mechanics, sensors, motors and microcontrollers.	Build basic working robots and circuits.
AI & IoT	Connected devices, ESP boards, sensors, dashboards and AI concepts.	Create smart and connected prototypes.
Project Lab	Students identify a problem and develop a prototype.	Working model + presentation/documentation.
Competition Track	Timed challenges, team building and prototype testing.	Competition-ready projects and teamwork.
Teacher Support	Basic training, project guidance and activity resources.	Teachers can facilitate more technology activities.

How a JSRO Engagement Can Work

1. Discover	Understand the school's students, infrastructure, goals and preferred topics.
2. Design	Create a program, event, workshop or competition structure around those requirements.
3. Deliver	Conduct hands-on sessions with instructors, projects, challenges and demonstrations.
4. Showcase	Present projects through exhibitions, competitions, certificates or demo days.
5. Continue	Move into recurring workshops, school subscriptions, advanced projects or innovation programs.

Who We Serve

Schools STEM, robotics and innovation programs	Students Hands-on learning and competitions	Colleges & Clubs Advanced workshops and hack-style events
Educators Teacher training and activity support	Organizations Custom workshops and technology events	Innovators Prototype development and R&D; support

Technology Areas

• Robotics & Embedded Systems	• Arduino / ESP32 / Microcontrollers
• IoT & Smart Systems	• Artificial Intelligence & Computer Vision
• Sensors, Electronics & Automation	• Mechanical Design & Prototyping
• Simulation & Virtual Prototyping	• STEM / STEAM Education

PARTNER WITH JSRO

Bring robotics, AI and innovation into your school, event or organization through a customized JSRO program.

JSRO • Robotics • AI • Innovation • Education
